

Welcome to the Greenhouse!

With Daptiv PPM Summer '08, we've created the Greenhouse, a new part of your experience with us as a vendor that makes you part of Daptiv's innovation and product development processes. The Greenhouse is a new place in the Daptiv Community website (<http://community.daptiv.com/>) where you can submit product ideas, vote or comment on existing ideas and get insight into which ideas have been implemented into our service.

The Greenhouse gives you:

- A direct channel to the Daptiv team
- A voice on the future of our product
- A single place to learn which planted ideas are 'bearing fruit' and when

We use the Greenhouse to:

- Get new ideas from customers
- Get feedback, have a dialog about ideas
- Clearly understand priorities of our customer and partner community

Using The Greenhouse

Go to the Daptiv Community

Access The Greenhouse via <http://community.daptiv.com/>, or you can link right to the Community from the Daptiv.com website or from the Help & Support menu in Daptiv PPM.

Login*

...to the Daptiv Community and click on the "Greenhouse".

*Note: for all On-demand users, just use the same credentials you use to log into Daptiv PPM – we made this change so more people can access the Community. All other users, please link to other instructions on the login page.

Cultivate Ideas

Vote on the idea(s) you feel will most help you in your work. You can browse the ideas already submitted using the Recent Ideas, Popular Ideas, In Progress and Implemented tabs. The most popular ideas will get the most consideration in Daptiv's development process.

Plant Ideas

Have an improvement you'd like to suggest for Daptiv PPM? Click on "Plant", and follow the menu to categorize, name, and clearly describe your idea. Oh – you'll want to "Search existing ideas" first to make sure the idea hasn't already been submitted and you merely need to vote for it.

Look Forward to the Harvest:

Once ideas are in the Development process at Daptiv, we'll move them to the "In Progress" tab. In fact, Daptiv has already released 5 features (In Spring '08) that came from the Greenhouse Beta. As ideas move from "In Progress" to ready to release, we'll move them to the Implemented tab for you to see.

We're excited to launch the Greenhouse. Of course, not every idea will get executed, and Daptiv will continue to try to anticipate needs you're not even thinking about yet.

We look forward to your help in making the leading on-demand PPM service even better.

Also New In Summer '08

More for Managers

Approve Timesheets Faster

With new performance improvements, it is now faster to approve single Timesheets from a Timesheets view or the Approvals tab, or to bulk-approve them from "Timesheets Pending My Approval".

Assign Resources Faster

New performance improvements in the Team Manager in Daptiv PPM let you assign resources more quickly.

More for Administrators

A New Security Option: IP Filtering

Now, Daptiv PPM administrators can define ranges of IP address that can log into the system. For example, you can enable IP address filtering that specifies only addresses on your corporate network, blocking access to anyone outside the network. Use this feature as you see fit to keep your enterprise secure.

Quality Updates

Between major releases of Daptiv PPM, we make Quality Updates several times per year. Starting after Summer '08, Daptiv will be posting Quality Update documentation to the Solutions Library in the Daptiv Community, as well as to the "What's New" page inside Daptiv PPM, so you can stay on top of the latest changes and improvements.

The On-demand Advantage

- Daptiv delivers its PPM auto-updates via the web, requiring no installation or re-configuration
- Daptiv provides security, redundancy, uptime, maintenance, and new features; you provide your creativity and business smarts to improving your work and your business
