

Methodology Improvement

Optimize your use of Daptiv PPM to refine and support project methodologies to increase efficiency and success

The three day, fixed-price workshop is led by Daptiv consultants who identify best practices for using the Daptiv solution to help you tailor methodologies and more effectively manage a work portfolio. You can use the workshop recommendations and your in-house resources to optimize your use of Daptiv PPM, or leverage the skills of Daptiv's consulting team to do so.

Making modifications or introducing new methodologies to your business processes signals an opportunity to review your use of Daptiv PPM to determine if you are taking full advantage of the software to maximize the value and return on investment.

As the project portfolio manager, you may find that a single company-sanctioned methodology is not appropriate for every type of project and can jeopardize project success, and that reporting across multiple methodologies is not easily assimilated which can result in inaccurate or confusing cross-project reports.

Daptiv's Methodology Improvement workshop provides services and best practice tools that help you determine or refine the appropriate methodology across projects. It helps you understand how to use Daptiv PPM to obtain optimum visibility across your portfolio even when using various execution methods. The workshop results in a roadmap with recommendations for consistent project execution and for instantiating the approved methodologies in Daptiv PPM. You can implement the roadmap recommendations yourself, or request Daptiv consultants to implement them for you.

Services to Make You Successful

Daptiv offers a spectrum of professional services that help you implement quickly and optimize your use of Daptiv PPM to help you fully maximize the return on your investment. Our professional services team and implementation partners are experienced in portfolio and project management, and use their knowledge of business processes and Daptiv PPM to ensure your successful deployment and adoption of Daptiv PPM.
